

Claims

1. A two-layer makeup cosmetic composition comprising a first layer foundation composition and a second layer finishing composition, wherein the first layer foundation composition and the second layer finishing composition are as follows:

the first layer foundation composition: (1) a composition containing a silicone oil having a viscosity of 15,000,000 cps or less as measured at 25°C and a powder ingredient; (2) a composition containing a siliconated polysaccharide compound, and a silicone oil having a low viscosity and/or a powder ingredient; or (3) a composition containing i) a silicone oil, ii) a polyether-modified silicone represented by the following formula, iii) water, and iv) hydrophobic powder:

[wherein B represents a methyl group, a phenyl group, or a polyoxyalkylene group represented by the formula $-C_3H_6O(C_2H_4O)_b(C_3H_6O)_cR^{13}$ (wherein R^{13} represents a hydrogen atom, an acyl group, or a C1-C4 alkyl group; and each of b and c represents an integer of 5-50); R^{12} represents a methyl group

or a phenyl group; m represents an integer of 50-1,000; n represents an integer of 1-40; and the molecule contains at least one polyoxyalkylene group represented by the above formula]; and

Sub
B1
the second layer finishing composition: a composition containing powder with minimized regular reflection and diffuse reflection in an amount of 1-100 wt.% on the basis of the entirety of the finishing composition.

2. The two-layer makeup cosmetic composition according to claim 1, wherein the amount of the powder with minimized regular reflection and diffuse reflection incorporated into the second layer finishing composition is 10-100 wt.% on the basis of the entirety of the finishing composition.

3. The two-layer makeup cosmetic composition according to claim 1 or 2, wherein the powder with minimized regular reflection and diffuse reflection has a regular reflection percentage of 1% or less and a diffuse reflection percentage of 1% or less.
